

CLEAN FIELD EDDHA Fe

RECOMMENDATION FOR USE IN SOYBEANS

CLEANFIELD EDDHA Fe is a management package for reducing iron deficiency chlorosis in soybeans. **CLEANFIELD EDDHA Fe** is recommended as an in-furrow soil or foliar applied fertilizer in soybeans.

In-furrow applications at 2.5 -4 qt/A have proven to be the most effective application type to alleviate and correct iron deficiency chlorosis.

In-Furrow Application: Mix 1.33-5.34 qt/A of product in water and apply in-furrow application at 2-10 gallons of total solution per acre. Higher water volumes in the rate range allow for easier mixing and complete dispersion of the product. The rate may vary depending on crop, soil conditions and environment. Higher rates may be necessary for specific regions as recommended by an agricultural authority.

Foliar Application: 1.33-2.67 qt/A prior to or immediately after deficiency symptoms occur to prevent or alleviate losses from iron deficiencies. 4pt/A is the most commonly used rate. Spray carrier (water) volumes of 10 to 20 gallons per acre (ground) or 5 gallons per acre (air) are recommended for best results. When deficiency symptoms are severe, a repeat application of 1.33-2.67 qt/A may be needed 2 or more weeks following the initial application. Applications need to be made as soon as, or prior to, iron deficiency chlorosis symptomatically appears.

RECOMMENDATION FOR USE IN SUGARBEETS

In-Furrow Application: Mix 1.33 qt/A of product in water and apply in furrow at 2-10 gallon of total solution per acre. Higher water volumes in the range allow for easier mixing and complete dispersion of the product.

CLEAN FIELD EDDHA Fe

Principal Functioning Agents:

Iron (Fe).....1.8 % Chelated as: ORTHO-ORTHO Fe-EDDHA

CLEANFIELD EDDHA Fe is targeting crops such as soybeans, where there is a history of chlorosis. Additionally, field crops such as sugar beets and legume crops have benefited from applications of CLEANFIELD EDDHA Fe. Other crops also do benefit where uptake of iron is a limiting factor. CLEANFIELD EDDHA Fe is a dark red liquid that temporarily discolors everything that it comes in contact with a red color. This will readily wash off with water.

MIXING PROCEDURE:

CLEANFIELD EDDHA Fe mixes easily with water with some sort of agitation recommended to obtain a complete and uniform mixture. If adding without agitation it is recommended to do so slowly to make sure it completely disperses into solution. Although some mixing with fertilizers has been successful, results have varied. Always conduct a small test prior to mixing with any other product besides water. Nitrogen fertilizers used in-furrow may hinder the effectiveness of the iron by soybeans. For the best results use water and the proper steps to obtain the best results.

MIXING INSTRUCTIONS WHEN TANKMIXING WITH FOLIAR PESTICIDES:

1. Check pesticide compatibility with **CLEANFIELD EDDHA Fe** by doing a small test or consulting with someone who has previously mixed with all pesticides in question
2. Start with a clean tank
3. Fill the spray tank 1/3 -1/2 full of water
4. While continuing to fill with water add your **CLEANFIELD EDDHA Fe** at the recommended rate
5. Add a water conditioner or a pH buffer
6. Add the pesticide or pesticides in order recommended on the pesticide label
7. Fill remainder of tank and agitate till fully mixed.

STORAGE AND DISPOSAL

Storage: Store in a cool dry place, store in original container. Keep container tightly sealed when not in use. Keep away from fire, flame or other potential sources of ignition. Do not contaminate water, food or feed by storage or disposal of this product.

Disposal: Do not reuse empty container. Triple rinse during mixing and loading. Dispose of container in a manner allowed by local, state and federal laws and regulations.
